

1 day training workshop

Course attendees will gain greater familiarisation, knowledge and appreciation of the CRACKWISE® software and be in a better position to carry out assessments.

Training approach

The workshop topics include:

- Overview of BS 7910
- Walkthrough familiarisation of CRACKWISE® screens
- Software exercises against all levels of assessment
- Implementation of complex problems
- Discussion of user problems

Suitable for

Engineers involved in the design, inspection and maintenance of structures who are responsible for the engineering critical assessment of welded structures.

On-site programme

TWI trainers undertake this training at your premises. The customer needs to provide a suitable training room, training facilities (i.e. whiteboard, PC data projector etc.), refreshments and lunch for all the delegates and the trainers.

We also recommend that each trainee has access to either a stand-alone desktop PC or notebook (using Windows NT 4.0, Windows 2000 or XP) during the workshop. If this is not possible, the minimum requirement is one PC between two trainees. The recommended maximum number of trainees is 15.

Training is also available at TWI's own PC training laboratory at TWI, Great Abington, Cambridge, UK.
